```
RT sequence variability of the hemagglutinin-neuraminidase gene.";

VIFOLOGY 169:260-272(1989).

C: FUNCTION: HEMAGGLUTININ I RESPONSIBLE FOR ATTACHING THE VIRUS
C: TO CELL RECEPTORS AND FOR INITIATING INFECTION. NEURAMINIDASE
C: ACTIVITY HELPS THE EFFICIENT SPREAD OF THE VIRUS BY DISSOCIATING
THE MATURE VIRIONS FROM THE NEURAMINIC ACID CONTAINING
C: GLYCOPROTEINS.
C:-!- CATALYTIC ACTIVITY: Hydrolysis of alpha-(2->3)-, alpha-(2->6)-,
alpha-(2->8)-glycosidic linkages of terminal sialic residues in
oligosaccharides, glycoproteins, glycolipids, colominic acid and
synthetic substrates.
-!- SUBCELULAR LOCATION: EXTERNAL, ANCHORED TO THE ENVELOPE BY ITS
N-TERMINAL HYDROPHOBIC SEQUENCE.
-!- SIMILARITY: BELONGS TO THE PARAMYXOVIRUSES HEMAGGLUTININ-
NEURAMINIDASE FAMILY
                                                                                                                           EMBL; D00243; BAA00174.1; -.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       "Characterization of the sites of proteolytic activation disease virus membrane glycoprotein precursors."; J. Biol. Chem. 263:12522-12531(1988).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              TO CELL RECEPTORS AND FOR INITIATING INFECTION. NEURAMINIDASE ACTIVITY HELPS THE EFFICIENT SPREAD OF THE VIRUS BY DISSOCIATING THE MATURE VIRIONS FROM THE NEURAMINIC ACID CONTAINING GLYCOPROTEINS.

CAPALYTIC ACTIVITY: Hydrolysis of alpha-(2->3)-, alpha-(2->6)-, alpha-(2->8)-glycosidic linkages of terminal stalic residues in oligosaccharides, glycoproteins, glycolipids, colominic acid and synthetic substrates.

SUBCELLULAR LOCATION: EXTERNAL, ANCHORED TO THE ENVELOPE BY ITS N-TERMINAL HYDROPHOBIC SEQUENCE.

SIMILARITY: BELONGS TO THE PARAMYXOVIRUSES HEMAGGLUTININ-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                NEURAMINIDASE FAMILY.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                     NCBI_TaxID=11187;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Newcastle disease virus (strain Her/33) (NDV).
                                                                                                                                                       FUNCTION: HEMAGGIUTININ IS RESPONSIBLE FOR ATTACHING THE VIRUS TO CELL RECEPTORS AND FOR INITIATING INFECTION. NEURAMINIDASE ACTIVITY HELPS THE EFFICIENT SPREAD OF THE VIRUS BY DISSOCIATING GLYCOPROTEINS.

CATALYTIC ACTIVITY: Hydrolysis of alpha-(2->3)-, alpha-(2->6)-, alpha-(2->8)-dycosidic linkages of terminal stablic residues in oligosaccharides, glycoproteins, glycolipids, colominic acid and synthetic substrates.

SUMCIAR LOCATION: EXTERNAL, ANCHORED TO THE ENVELOPE BY ITS N-TERMINAL HYDROPHOBIC SEQUENCE.

SIMILARITY: BELONGS TO THE PARAMYXOVIRUSES HEMAGGLUTININ-
                                                                                                                                                NEURAMINIDASE FAMILY.

I. Multiple lineages defined by sequence variability of the hemagglutinin-neuraminidase gene."; Virology 169:260-272(1989).

-I- FUNCTION: HEMAGGLUTININ IS RESPONSIBLE FOR ATTACHING THE VIRUS TO CELL RECEPTORS AND FOR INITIATING INFECTION. MEURAMINDASE ACTIVITY HELPS THE EFFICIENT SPREAD OF THE VIRUS BY DISSOCIATING THE MATURE VIRIONS FROM THE NEURAMINIC ACID CONTAINING GLYCOPROTEINS.

Sequence variability of the hemagglutinin-neuraminidase gene.";

L Virology 169:260-272(1989).

C -!- FUNCTION: HEMAGGLUTININ IS RESPONSIBLE FOR ATTACHING THE VIRUS
TO CELL RECEPTORS AND FOR INITIATING INFECTION. NEURAMINIDASE
ACTIVITY HELPS THE EFFICIENT SPREAD OF THE VIRUS BY DISSOCIATING
THE MATURE VIRIONS FROM THE NEURAMINIC ACID CONTAINING
C THE MATURE VIRIONS HOW THE NEURAMINIC ACID CONTAINING
C GLYCOPROTEINS.

C -!- CATALYTIC ACTIVITY. Hydrolysis of alpha-(2->3)., alpha-(2->6).,
alpha-(2->8).glycopidic linkages of terminal sialic residues in
c alpha-(2->8).glycoproteins, glycolipids, colominic acid and
c synthetic substrates.

C -!- SUBCELLULAR LOCATION: EXTERNAL, ANCHORED TO THE ENVELOPE BY ITS
C -!- SIMILARITY: BELONGS TO THE PARAMYXOVIRUSES HEMAGGLUTININ-
NEURAMINIDASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This SWISS-PROT entry is copyright. VITOLOGY 179:738-748(1990).

-i- FUNCTION: HEMAGGLUTININ IS RESPONSIBLE FOR ATTACHING THE VIRUS FOR CELL RECEPTORS AND FOR INITIATING INFECTION. NEURAMINIDASE ACTIVITY HELPS THE EFFICIENT SPREAD OF THE VIRUS BY DISSOCIATING THE MATURE VIRIONS FROM THE NEURAMINIC ACID CONTAINING GIXCOPROTEINS.

-i- CATALYTIC ACTIVITY: Hydrolysis of alpha-(2->3)-, alpha-(2->6)-, alpha-(2->8)-glycosidic linkages of terminal sialic residues in oligosaccharides, glycoproteins, glycolipids, colominic acid and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               HEMA SV41
